

Editorial

Strong message seems to have come out of group of countries currently negotiating delay on climate change action. They have stated that countries that have opted out of these grouping have no business to comment on their decisions! Currently there is a lull in activities dealing with climate change and no immediate executable action is planned by nations in the forefront of actions on climate change.

Japan is experimenting with Hydrogen fuel on commercial scale so that their transportation can become really green before the Tokyo Olympics in 2020. If they succeed, it opens up a large avenue for global transportation network to really become green.

The Arctic has become practically navigable in winter months and come summer, the traffic thru Arctic is bound to make it even wider and deeper with very little ice thereby posing challenges to animals such as polar bear, seals etc. A very rare whale, native to Arctic but with a horn, has been studied by scientists to understand the habitat of such an exception.

The current issue of AJWEP has quite a variety of reading materials—from social science to atmospheric science.

Have a happy reading and wishing all readers a very happy 2020!
