

EDITORIAL

This issue contains Part II of the Proceedings of the Sixth International Congress of Biorheology, held at the University of British Columbia, Vancouver, B.C., Canada, 27 July to 1 August, 1986. Part III is published in CLINICAL HEMORHEOLOGY, 7 number 2, 1987. Subsequent Parts, IV, etc. will be published in forthcoming issues of BIORHEOLOGY.

Communications not associated with the Congress at Vancouver, which have been accepted by our Editors are contained in this issue.

This issue also contains a Review Article entitled 'On Diffusion in Organized Assemblies and in Biological Membranes' which is an invited contribution.

A new addition to our Journal is the section 'Biorheology News'. It will contain news items including reports of meetings pertaining to biorheology, held by national and international societies or groups which deal with different fields of biorheology or are of interest to our Readers. This was emphasized in the Editorial by one of us (ALC) in volume 23, 435-441, 1986.

'Biorheology News' in this issue contains the following two reports: 'Report of an Organizing Meeting-North American Society of Biorheology' by D.E. McMillan, Secretary of the North American Society of Biorheology. The other one, entitled 'Report on the Working Group Theoretical, Experimental and Clinical Hemorheology of the G.D.R. and on the 3rd National Symposium on Hemorheology, November 1985 Bad Blankenburg, German Democratic Republic', is by D. Lerche, Chairman of the Working Group.

We should like to encourage the submission of reports by officers of biorheological societies or groups which deal with information of interest to our Readers.
