

BOOK REVIEW

Hämorrheologie und Durchblutungsstörungen von der Geburt bis ins Alter
(Hemorheology and disturbances of blood flow from birth onward until age)

Printed 1995 by: Blackwell Wissenschafts-Verlag Berlin, Germany

Editors: O: Linderkamp, E. Friederichs, A.M. Ehrly

202 pages, 83 figures, 56 tables
ISBN 3-89412-155-6

The book reports about the 11th annual Meeting of the German Society of Clinical Microcirculation and Hemorrheology e.V. in Heidelberg 1992. The classical areas of the cerebral, coronary and peripheral disturbances of the blood flow have been reported in different age groups. 9 reports are dealing with changes of hemorrheology and microcirculation of new-born infants. The prognostic meaning of an increased blood viscosity was discussed on 5 reports. On 4 reports, therapeutic effects of hemodilution and plasmapheresis were shown. A special characteristic of this association is its dealing with 10 reports about Capillary microscopy and the Doppler-Sonography. The reports are documented along with figures, tables and literature references.
