

#### EDITORIAL

We are glad to welcome four new Editors of CLINICAL HEMORHEOLOGY. They are Julius J. Friedman, Indianapolis, Indiana, USA; Manabu Kaibara, Chiba, Japan; F. Mahler, Bern, Switzerland and Andrew McCulloch, La Jolla, California, USA. Both J.J. Friedman and F. Mahler will act chiefly as Editors of Communications dealing with clinical perihemorheology, while M. Kaibara will act mainly as Editor of Communications of clinical hemorheology as it concerns gynecology and obstetrics. A. McCullough is the Editor of the Software Survey Section, as he is also engaged in the same capacity in BIORHEOLOGY.

Clinical perihemorheology will acquaint our Readers with clinical aspects of perihemorheology, a term which was recently introduced by one of us concerning the rheology of fluids and structures in the perivascular spaces (A.L. Copley, Biorheology, 24, 285-286, 1987; Clinical Hemorheology, 7, 377-378, 1987). The two fields of clinical biorheology, viz., clinical hemorheology and clinical perihemorheology are closely interconnected, as they deal with the exchanges between the vessel-blood organ and its surrounding tissues in clinical conditions.

We should like to emphasize that it will be necessary for authors of communications presented at the Bordeaux Conference last year, to submit their manuscripts, in case they have not yet done so, as soon as possible for publication in our Journal. Communications concerning Symposia and Round Table Discussions should be submitted to the corresponding Chairmen, who serve as Guest Editors in case they are not Editors of our Journal. Free

Communications and manuscripts pertaining to presentations of Posters should be submitted to an Editor of the Authors' choice.

Alfred L. Copley
