

Book review:

Atlas of Pathology, CD-ROM 4 and 5 (Stomatology (eds C. Brocheriou, A.C. Baglin, and M. Wassef)– ENT and Urological pathology (eds. A. Viellefond, H. Bastian, C. Billerey, R. Bouvier, B. Cochand-Priollet, M.C. Dauge-Geffroy, B. Fontaniere).

Springer, Electronic Media, ISBN , 3-540-14654-7, 240DM, 3-540-14657-1, 240DM

The CD-ROMs belong to a series of organ-related diseases which has been designed to train young colleagues and serve as retrieval in difficult diagnostic cases. The difficulties start already after having placed the CD-ROM in drive. The CD-ROM opens a window correctly; however, it is impossible to perform one of the next steps without reading the "help" assistance. Within the help statements numerous consecutive steps have to be performed prior to get the CD-ROM to work. The images are of moderate quality, the text is limited. It is a waste of time to describe this electronic medium more in detail; it is just not appropriate adjusted to the modern computer world.
