In Table 4 on page 562 of the original version of this article, the results for 'Single or divorced' and 'Married or remarried' categories under Hobby*marital status ($p = 0.044$) in the first column are mistakenly swapped. Therefore the fields 'Single or divorced' and 'Married or remarried' should be reversed. This issue is only related to Table 4, and the in-text results are correct.

The updated and corrected Table 4 has been placed in its entirety below.

Table 4
Sub-hazard ratios and 95% confidence intervals of the competing risk models indicating the incidence of dementia for individual activities with significant interactions for sex and marital status
