

Supplementary Material

Dopaminergic Dysfunction Is More Symmetric in Dementia with Lewy Bodies Compared to Parkinson's Disease

Supplementary Figure 1. Correlation between age and signal intensity in A) right putamen, B) left putamen, C) right caudate, and D) left caudate in healthy controls. All correlations were significant with p -values < 0.05 . Linear regression equations were as follows: A) $Y = -0,02963 * X + 7,191$; B) $Y = -0,02770 * X + 7,007$; C) $Y = -0,03892 * X + 7,658$; D) $Y = -0,03640 * X + 7,434$. SBR, specific binding ratio.
