Gait Analysis with Wearable Sensors in Isolated REM Sleep Behavior Disorder Associated with Phenoconversion: An Explorative Study

Supplemental Table 1. Baseline gait parameters for healthy controls (HCs), patients with idiopathic rapid eye movement sleep behavior disorder (iRBD) who converted to definitive neurodegenerative diseases (converters), and remaining iRBD patients survived to be disease-free (non-converters). Data presented as mean \pm SD. Repeated measures analysis of covariance was used for statistical comparison.
