On page 590, under the topic 3.3, there is a decimal missing. The section should read as follows:

3.3 Internal consistency reliability analyses

Overall, the AMIS-II demonstrated adequate internal consistency reliability. Internal consistency reliabilities for the AMIS-II total scale and subscales were high ($\alpha = 0.90 - 0.95$). In the Hispanic/Latino subsample, the internal consistency reliabilities were also high for the AMIS-II total scale ($\alpha = 0.94$) and the subscales ($\alpha = 0.88 - 0.92$).
