ACCIS guide to United Nations information sources on the environment

Containing details of environmental information activities within 34 organizations, the *ACCIS guide to United Nations information sources on the environment* is a collaborative effort between ACCIS and the Programme Activity Centre of the International Environmental Information System (INFOTERRA PAC) of the United Nations Environment Programme (UNEP). It is the second in a series of ACCIS guides to sources of information held within the United Nations system on some of the vital areas covered by its work. These sources include databases, documentation centres, libraries, publications, and other programmes and activities carried out by organizations.

The 141-page guide also gives details of information sources within a selected number of concerned organizations working outside, but often closely with, the United Nations system. It is hoped that the guide will make easier the task of locating and cross-referencing the information contained in these organizations.

The guide deals with information sources on environmental issues as they relate to: Agriculture and Land Use, Aquatic Environment, Atmosphere and Climatology, Demography and Population, Energy, Human Settlements and Human Health, Industry and Transportation, Natural Resources, Pollution and Statistics.

The ACCIS guide to United Nations information sources on the environment is available, price US\$15, from UN Sales Sections in Geneva and New York. ISBN 92-1-100339-3; ISSN 1011-3746; United Nations Sales Number GV.E.87.0.6.
