Journal of Economic and Social Measurement

The Journal of Economic and Social Measurement (JESM) is a quarterly journal that is concerned with the investigation of all aspects of *data production, distribution, and use*, with the primary focus being economic and social data.

JESM publishes articles that consider the statistical methodology of social science measurements. It is concerned with the methods and problems of data distribution, including the design and implementation of data base systems and, more generally, computer software and hardware for distributing and accessing statistical data files.

– It addresses the technical and even legal problems of the collection and use of data, legislation and administrative actions affecting government produced or distributed data files, and similar copies.

– It serves as a forum for the exchange of information and views between data producers and users. In addition, it considers the various uses to which statistical data may be put, particularly to the degree that these uses illustrate or affect the properties of the data.

The data considered in JESM are usually economic or social, as mentioned, but this is not a requirement; the editorial policies of JESM do not place *a priori* restrictions upon the data that might be considered within individual articles. Furthermore, there are no limitations concerning the source of the data.

Editor: Charles G. Renfro, C.G. Renfro and Associates, Bala Cynwyd, PA 19004, USA.

Associate editors: F. Gerard Adams; Dennis J. Aigner; Martin David; James Durbin; Ivor S. Francis; Daniel H. Garnick; Charles C. Holt; Lawrence R. Klein; Wassily Leontief; Richard C. Rockwell; Jack Triplett; Arnold Zellner.
