

Keyword Index Volume 3 (2005)

1Cr–1Mo–0.25V steel	1	gradient fracture criterion	217
		grained materials	175
acoustic emission	73	Hurst exponent	81
acoustic emission monitoring	127	hydraulic fracture	139
aging process	25	hydrogen embrittlement	53
aleatory	191		
atomistic simulation	105	image analysis	191
axial compression load	15	interface	105
		interface debonding	61
backscattered electron imaging	191	interfacial transition zone	191
bimaterial	105		
brittle and quasi-brittle materials	205	Kalman-Neuro Algorithm	37
brittle fracture	53		
burr shape	37	laboratory measurements	139
		life prediction	127
cement	191	mechanisms	1
composite tubes	15	microstructure	191
concrete	191		
crack growth	127	neural network	37
crack initiation and propagation	25	non-propagating crack	25
creep fracture	1	non-singular stress concentration	205
creep	1	numerical evaluations	217
damage accumulation	73	optimum welding condition	37
damage mechanics	127		
data analysis	1	percolation	199
dislocation free zone	53	plastic zone	73
dynamic fragmentation	117	PMMA	205
		porosity	191
energy absorption	15		
epistemic	191	random fuse model	199
experimental data	217		
extreme value theory	175	scale effect	53
		scaling	139, 199
failure modes	15	scanning electron microscopy	191
fatigue fracture	81	similarity law	53
fiber reinforced metal matrix composites	61	size effect	175, 205
finite element method	61	snap-back instability	61
finite velocity fragmentation	117	stainless steel joint	37
foam-polystyrene plates	217	stress concentration	217
fractography	81	stretched zone	81
fracture criteria	205	structural assessment	127
fracture	105, 199, 217		
fragment size predictions	117		
fragmentation model	117		
friction welding	37		

superplasticity	61	torsional fatigue	25
supersonic	105	trigger point	53
tensile pre-strain	25	ultrasound attenuation	73
tensile strength	37	uncertainties	191
the boundary element method	217	woven roving glass/epoxy	15
tip asymptotics	139
