

Supplementary Figure S3: Expression and correlation between the immune checkpoint molecules PD-1 and PD-L1 across the CaCx immune subtypes based on the qRT-PCR. (a) Boxplot representing the distribution of expression of PD-L1 across the Subtypes – A (immune-depleted) and B (immune-enriched). **(b-c)** Correlation plots between the expression (Δ Ct) of PD-1 (PDCD1) and PD-L1 (CD274) among the two immune subtypes- **(b)** A (immune-depleted) and **(c)** B (immune-enriched).
