

## From the Editor

---

We are pleased to conclude this issue of *WORK* with four additional articles. Epstein, Colford, Epstein, Loye and Walsh authored a manuscript titled, The Effects of Feedback on Computer Workstation Posture Habits. One interesting aspect of this article is that the authors, Colford, Epstein and Loye were middle school students when they conducted this research project.

Young, Trudeau, Odell, Marinelli and Dennerlein conducted an important study to advance our understanding of the use of tablet technology in their article titled, Touch-screen tablet user configurations and case-supported tilt affect head and neck flexion angles.

Haladay, Blorstad, McBrier, Denegar and Lengerich conducted an important study from 2002–2006 which investigated back pain among health care workers in Pennsylvania.

Adding to the advancing body of knowledge in the area of children and backpacks, we are delighted to publish Kistner, Fiebert, and Roach's article on the effect of backpack load carriage on cervical posture in primary schoolchildren.

Finally, this issue includes with our engaging Narrative Reflections on Occupational Transitions.

All my best

Karen

Editor, *WORK*
